BACKEND ENHANCEMENT REQUEST

AML/CFT/CPF MONITORING DASHBOARD

Functional Requirements for Development Team

Document Item	Details
Request Type	Backend Enhancement / AML Monitoring Integration
Requesting Department	Risk Compliance and Analysis
Location	Backend
Authorized Users	**Admin**: Rex R. Español **Users**: Joshua Balbaquera Philip Russel L. Escareces
Objective	To address our regulatory compliance gap and to establish and include the adoption of an ML/TF monitoring system with the capability, among others, to generate timely, accurate, and complete statistical reports and the ability to inform the AML Committee Chairman, The Chairman and the BODs on the company's AML and CTPF compliance. An Automated AML Monitoring Dashboard.

1. Purpose

The Risk Compliance and Analysis Department request a dedicated AML/CFT/CPF Monitoring Dashboard integrated into the existing Backend System. The objective is not to build a separate duplicate system. Where a required function already exists in the Backend, the developers should just retrieve, integrate or surface that function within the AML Dashboard. New development should focus on AML-specific monitoring, alerting, investigation workflow, reporting visibility and auditability.

We provided below the HTML as a prototype or mockup containing sample data and interface behavior that we want in our AML Monitoring Dashboard. The production version must connect to live Backend data and must not retain hard-coded sample counts, transactions or alerts. The prototype contains seven underlying tabs explained below.

2. Legal Basis

2018 IMPLEMENTING RULES AND REGULATIONS OF REPUBLIC ACT NO. 9160, OTHERWISE KNOWN AS THE ANTI-MONEY LAUNDERING ACT OF 2001, AS AMENDED	**Rule 22. TRANSACTION REPORTING** Section 5. AML/CTF Monitoring System. 5.1. All covered persons shall adopt an AML/CTF monitoring system that is appropriate for their risk profile and business complexity and in accordance with these Rules. The system should be capable of generating timely, accurate and complete reports to lessen the likelihood of any reputational and compliance risks, and to regularly apprise the board of directors and senior management on AML/CTF compliance.

	5.2. **Electronic Monitoring and reporting systems for AML/CTF.** 5.2.1. Covered persons that are considered complex, as determined by SAs shall adopt an electronic AML/CTF system capable of monitoring risks associated with ML/TF as well as generating timely reports for the guidance and information of its board of directors and senior management. It should ensure that the system, at a minimum, shall detect and raise to the covered person's attention, transaction and/or accounts that qualify either as covered transaction or suspicious transaction, as herein defined. The covered person shall endeavor to interface the electronic monitoring system with the systems of its branches, subsidiaries and affiliates, if any, for group-wide AML/CTF monitoring. 5.2.2. The system must have, at least, the following automated functionalities: a. CTR/STR Monitoring – performs statistical analysis, profiling and able to detect unusual patterns of account activity; b. Watchlist Monitoring – checks transfer parties (originator, beneficiary, and narrative fields) and the existing customer database for any listed undesirable individual or corporation; c. Investigation – checks for given names throughout the history of payment stored in the system; d. Can generate all the CTRs of the covered person accurately and completely with all the mandatory field properly filled up; e. Must provide a complete audit trail; f. Capable of aggregating activities of a customer with multiple accounts on a consolidated basis for monitoring and reporting purposes; and g. Has the capability to record all suspicious transactions and support the investigation of alerts generated by the system and brought to the attention of Senior Management whether or not a report was filed with the AMLC. 5.2.3. Covered persons with existing electronic system of flagging and monitoring transactions already in place shall ensure that their existing system is updated to be fully compliant with functionalities as those required herein.

3. Proposed AML Monitoring Dashboard Tabs

Tabs	Purpose
1. Total Number of Players	Central player population view with customer, KYC, account and AML-relevant information.
2. Risk Profiling Tab	Players that are tagged as Low, Medium and High risk
3. Account Status Tab	Players that have status of Under Review, Normal, Freeze, Deactivated, etc.
4. Daily Transaction Monitoring	Monitoring of Daily Deposit and Withdrawal of the Players
5. Red Flag Alerts	Monitoring of Suspicious Transactions Tagging and Monitoring
6. Large Amount Report	Players that generated 500,000.00 or more.
7. Periodic Updating of Users	Monitoring of Customer Information Updating of their CDD and EDD information.

4. Backend Integration and Enhancement Requirements

The AML Monitoring Dashboard should serve as the central monitoring interface for the AML/CFT/CPF Department.

Some of the information and functions requested below already exist in the current Backend system. For these functions, the Development Team should connect and retrieve the existing Backend data/results and display them in the AML Monitoring Dashboard, rather that creating a separate or duplicate process.

Other functions are not currently available or require additional AML Monitoring logic. These functions should be developed and integrated into the AML Monitoring Dashboard.

The requirements are categorized below as Existing Backend Function, New Dashboard Function, or Existing Backend Function with Dashboard Enhancement.

Tabs	Explanation
1. Total Number of Players	New Dashboard Function with Existing Backend Data The AML/CFT/CPF Department currently does not have direct access to the information showing the total number of registered players. The AML Monitoring Dashboard should provide this information with the ability to **filter and extract the total number of players based on the selected date and time period**. The player records may already exist in the Backend; therefore, the requirement is to make the relevant data accessible through the AML Dashboard rather than creating a separate player database.
2. Risk Profiling Tab	Existing Backend Function – Connect and Display This tab should display the AML risk profile of all players, including the player's **Low, Medium, and High-Risk Classification, applicable risk factors, risk score, date of assessment, KYC Status, and EDD Status**, where available. The risk profiling function **already exists in the Backend**. The AML

	Monitoring Dashboard should therefore **retrieve and display the existing risk assessment and result** rather than creating a separate risk profiling process or risk engine.
3. Account Status Tab	Existing Backend Function – Connect and Display This tab should display the current account status of players, including **Normal, Under Review, Frozen, Temporarily Frozen, Deactivated, Banned, NDRP Frozen, and other applicable restricted statuses**. Where available, the Dashboard should also display the **reason for the restriction and the date when the restriction was applied**. This function already exists in the Backend. The AML Monitoring Dashboard should **retrieve and reflect the same account status information maintained in the Backend**.
4. Daily Transaction Monitoring	Existing Backend Transaction Data – New AML Monitoring View This tab should provide the AML Team with access to **all player deposit and withdrawal activities** recorded in the platform. The information should include, where available, the **number of transactions, total amount, transaction date/time, transaction type, payment channel, and transaction reference**. The underlying transaction records already exist in the Backend. The AML Dashboard should therefore **retrieve and organize the existing transaction data into an AML monitoring view**. The AML Team should be able to filter the information by **date/time, player, transaction type, and transaction amount**.
5. Red Flag Alerts Tab	New Function – Development Required The Development Team should program AML risk indicators and integrate them into the system so that applicable red flags can be **automatically identified during registration and through ongoing monitoring of player activity and transactions**. The Dashboard should display alerts generated by the programmed AML indicators. Examples may include: **transactions not commensurate with the player's expected gaming behavior, structuring patterns, rapid deposit and withdrawal activity, dormant accounts of six (6) months or more followed by subsequent activity, duplicate accounts, same IP/device indicators, NDRP/restricted-player indicators, and other AML red flags capable of being programmed**.

	Each alert should, where applicable, display the **player, red flag detected, date/time detected, severity, alert status, and assigned AML reviewer**.
6. Large Amount Transaction Tab	Existing Backend Function – Connect and Enhance The Large Amount Transaction monitoring function already exists in the Backend. The AML Monitoring Dashboard should **retrieve and display the same information** rather than creating a separate transaction-identification process. The Dashboard should also include the requested **export function and other applicable features identified in the HTML mockup**, such as filtering, searching, and viewing of transaction details.
7. Periodic Updating of Users	New Function / Existing Backend Data Where Available This tab should identify players whose **customer information, KYC information, or supporting documents require updating or renewal**. It should display the applicable **missing information, document status, update status, due date, and overdue status**, where applicable. For example, if a player's valid ID has expired, the system should automatically identify the player and display the applicable status for AML monitoring and follow-up. If the Backend already contains document expiry dates or customer information, the AML Dashboard should retrieve and use the existing data. If this monitoring function is not currently available, the Development Team should add the necessary logic.

5. Expected Outcome: Visual reference of how the backend should appear after the enhancement.

请求类型 后台增强 / AML 监控集成
申请部门 风险合规与分析部
位置 后台系统
授权用户 管理员：
Rex R. Español

用户：
Joshua Balbaquera
Philip Russel L. Escareces
目标 为解决我们的监管合规缺口，并建立及纳入 ML/TF 监控系统，该系统应具备包括但不限于及时、准确及完整地生成统计报告的能力，并能够向 AML 委员会主席、董事长及董事会成员提供有关公司 AML 及 CTPF 合规情况的信息。建立自动化 AML 监控仪表板
。

1. 目的
   风险合规与分析部申请在现有后台系统中集成一个专用的 AML/CFT/CPF 监控仪表板。其目的不是建立一个独立的重复系统。对于后台系统中已经存在的功能，开发团队只需将该功能进行提取、集成或展示至 AML 仪表板中。新的开发工作应重点放在 AML 专属监控、预警、调查工作流程、报告可视性及审计追踪方面。
   以下提供的 HTML 是一个原型或模拟界面，其中包含我们希望在 AML 监控仪表板中实现的示例数据及界面行为。正式生产版本必须连接至后台系统的实时数据，不得保留硬编码的示例数量、交易或警报。该原型包含以下七个主要标签页，具体说明如下。
2. 法律依据
   2018 年《共和国法第 9160 号实施细则及条例》，即经修订的《2001 年反洗钱法》规则 22. 交易报告

第 5 节. AML/CTF 监控系统。

5.1. 所有受监管实体均应根据其风险状况及业务复杂程度，并依照本规则，采用适当的 AML/CTF 监控系统。该系统应具备及时、准确及完整生成报告的能力，以降低声誉风险及合规风险发生的可能性，并定期向董事会及高级管理层报告 AML/CTF 合规情况。

5.2. AML/CTF 电子监控及报告系统。

5.2.1. 经主管机构（SAs）认定为复杂的受监管实体，应采用电子 AML/CTF 系统，以监控与 ML/TF 相关的风险，并及时生成报告，供董事会及高级管理层参考及了解。该系统至少应确保能够识别并提醒受监管实体注意符合本文所定义的受监管交易或可疑交易的交

易和/或账户。受监管实体应努力将电子监控系统与其分支机构、子公司及关联公司的系统（如有）进行对接，以实现集团层面的 AML/CTF 监控。

5.2.2. 该系统至少必须具备以下自动化功能：

a. CTR/STR 监控 – 执行统计分析、客户画像，并能够检测账户活动中的异常模式；

b. 观察名单监控 – 检查转账相关方（发起人、受益人及备注字段）以及现有客户数据库，以识别任何被列入名单的不受欢迎个人或公司的情况；

c. 调查 – 在系统所存储的支付历史记录中查询指定姓名；

d. 能够准确、完整地生成受监管实体的所有 CTR，并确保所有强制性字段均得到正确填写；

e. 必须提供完整的审计追踪；

f. 能够以合并方式汇总拥有多个账户的客户的活动，以用于监控及报告；以及

g. 能够记录所有可疑交易，并支持对系统生成并提请高级管理层注意的警报进行调查，无论是否已向 AMLC 提交报告。

5.2.3. 已经建立电子交易标记及监控系统的受监管实体，应确保其现有系统得到更新，以完全符合本文所要求的各项功能。

3. 拟议的 AML 监控仪表板标签页

标签页　用途

1. 玩家总数　集中查看玩家总体数据，包括客户、KYC、账户及 AML 相关信息。
2. 风险评级标签页　显示被标记为低风险、中风险及高风险的玩家。
3. 账户状态标签页　显示账户状态为审核中、正常、冻结、停用等的玩家。
4. 每日交易监控　监控玩家每日存款及提款活动。
5. 红旗警报　监控可疑交易标记及持续监控。
6. 大额交易报告　显示产生 500,000.00 或以上交易的玩家。
7. 用户定期更新　监控客户 CDD 及 EDD 信息的更新情况。

4. 后台系统集成及增强功能需求

AML 监控仪表板应作为 AML/CFT/CPF 部门的中央监控界面。

以下部分所要求的信息及功能目前已经存在于现有后台系统中。对于这些功能，开发团队应连接并提取现有后台的数据/结果，并将其显示在 AML 监控仪表板中，而不是建立独立或重复的处理流程。

其他功能目前尚不存在，或需要额外的 AML 监控逻辑。这些功能应进行开发并集成至

AML 监控仪表板中。
以下将需求分类为现有后台功能、新增仪表板功能，或现有后台功能及仪表板增强功能。

标签页　说明

1. 玩家总数　使用现有后台数据的新仪表板功能
   AML/CFT/CPF 部门目前无法直接访问显示已注册玩家总数的信息。AML 监控仪表板应提供该信息，并能够根据所选择的日期及时间范围筛选及提取玩家总数。

2. 风险评级标签页 现有后台功能 – 连接并展示
   该标签页应显示所有玩家的 AML 风险评级，包括玩家的低风险、中风险及高风险分类、适用的风险因素、风险评分、评估日期、KYC 状态及 EDD 状态（如有）。

风险评级功能已经存在于后台系统中。因此，AML 监控仪表板应提取并显示现有的风险评估及结果，而不是建立独立的风险评级流程或风险引擎。

3. 账户状态标签页 现有后台功能 – 连接并展示
   该标签页应显示玩家当前的账户状态，包括正常、审核中、冻结、临时冻结、停用、禁止使用、NDRP 冻结以及其他适用的受限制状态。
   如有相关信息，仪表板还应显示限制原因以及限制措施实施的日期。

该功能已经存在于后台系统中。AML 监控仪表板应提取并反映后台系统所维护的相同账户状态信息。

4. 每日交易监控 现有后台交易数据 – 新增 AML 监控视图
   该标签页应向 AML 团队提供访问平台中记录的所有玩家存款及提款活动的功能。
   相关信息应包括（如有）：交易数量、交易总金额、交易日期/时间、交易类型、支付渠道及交易参考编号。

底层交易记录已经存在于后台系统中。因此，AML 仪表板应提取并整理现有交易数据，并将其转换为 AML 监控视图。

AML 团队应能够按照日期/时间、玩家、交易类型及交易金额对信息进行筛选。

5. 红旗警报标签页 新增功能 – 需要开发
   开发团队应将 AML 风险指标进行程序化，并将其集成至系统，使适用的红旗风险能够在注册过程中以及通过持续监控玩家活动及交易而自动识别。

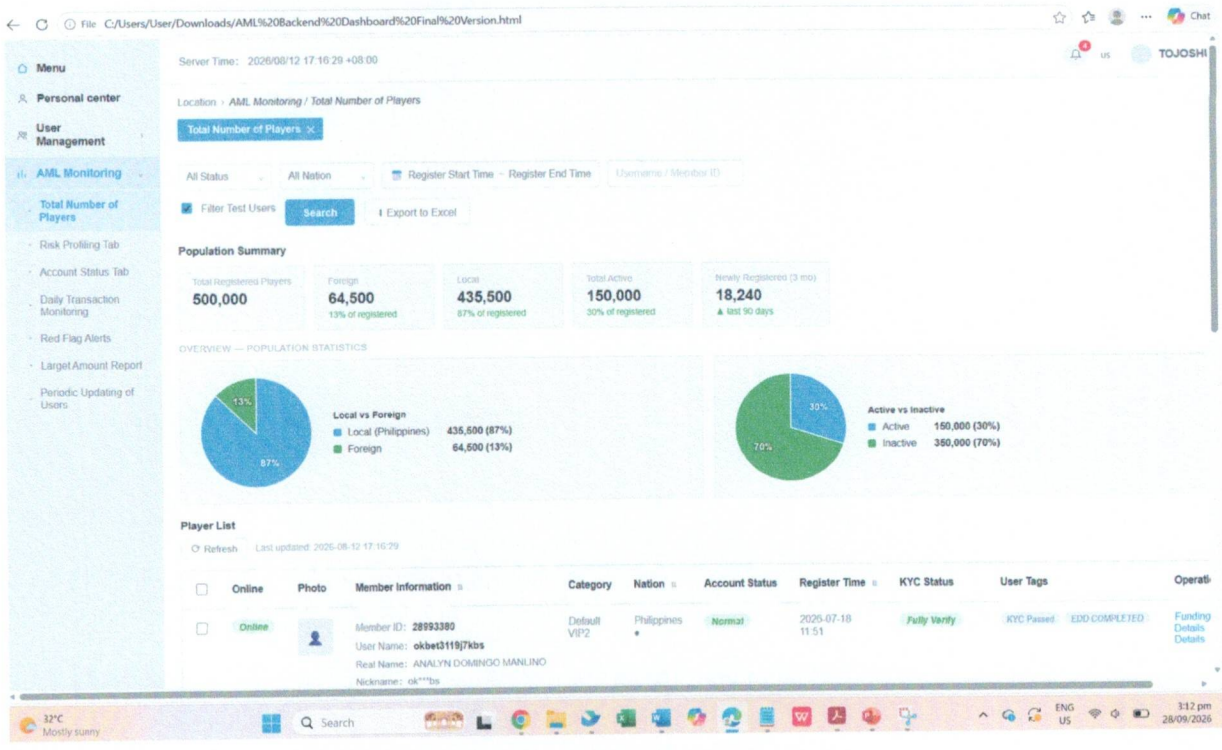

仪表板应显示由已编程 AML 指标所生成的警报。例如，可包括：与玩家预期游戏行为不相称的交易、结构化交易模式、快速存款及提款活动、休眠六（6）个月或以上后再次发生活动的账户、重复账户、相同 IP/设备指标、NDRP/受限制玩家指标，以及其他可通过程序实现的 AML 红旗风险。

每项警报在适用情况下应显示玩家、检测到的红旗风险、检测日期/时间、严重程度、警报状态及指定的 AML 审核人员。

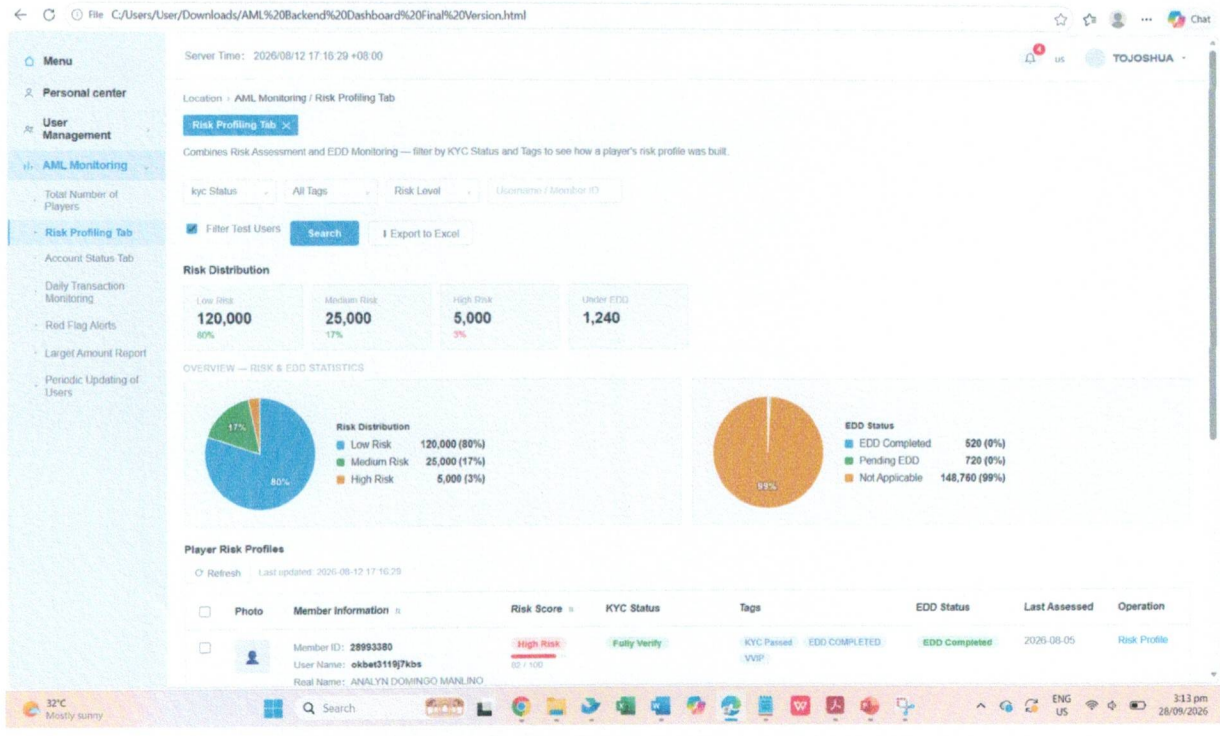

6. 大额交易标签页 现有后台功能 – 连接并增强
   大额交易监控功能已经存在于后台系统中。AML 监控仪表板应提取并显示相同的信息，而不是建立独立的交易识别流程。
   仪表板还应包括所要求的导出功能以及 HTML 模拟界面中所列的其他适用功能，例如筛选、搜索及查看交易详细信息。
7. 用户定期更新 新增功能 / 现有后台数据（如有）
   该标签页应识别其客户信息、KYC 信息或支持性文件需要更新或续期的玩家。适用情况下，应显示缺失信息、文件状态、更新状态、到期日期及逾期状态。
   例如，如果玩家的有效身份证件已经过期，系统应自动识别该玩家，并显示相应状态，以供 AML 监控及后续跟进。
   如果后台系统已经包含文件到期日期或客户信息，AML 仪表板应提取并使用现有数据。如果目前尚无此监控功能，则开发团队应增加必要的系统逻辑。
8. 预期结果：后台增强完成后应呈现的视觉界面参考。

AML Monitoring Dashboard Hyperlink: AML

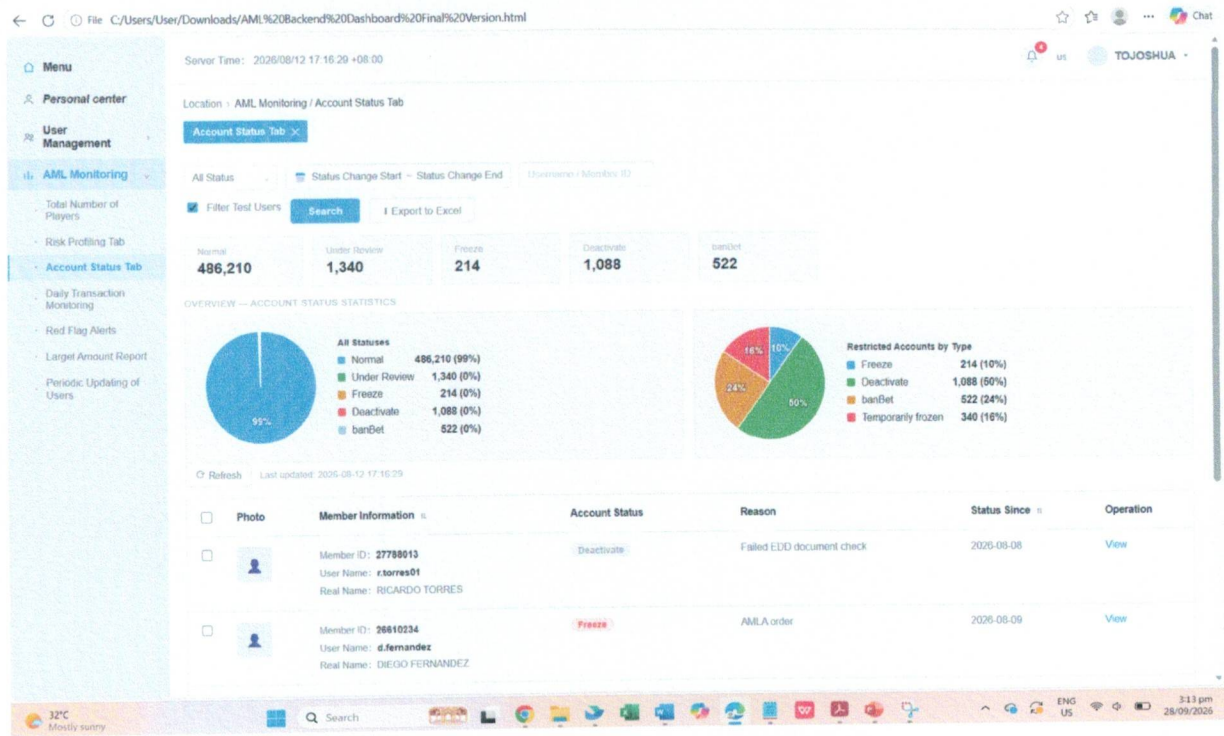

1. Total Number of Players

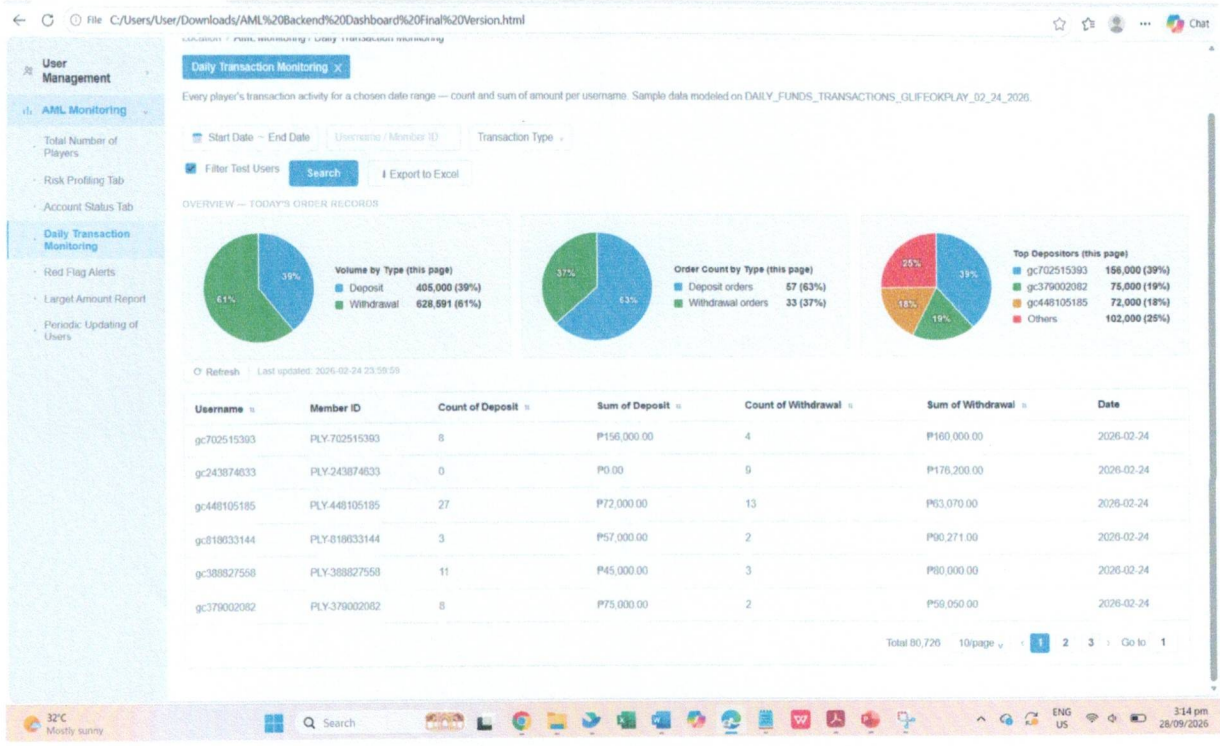

2. Risk Profiling Tab

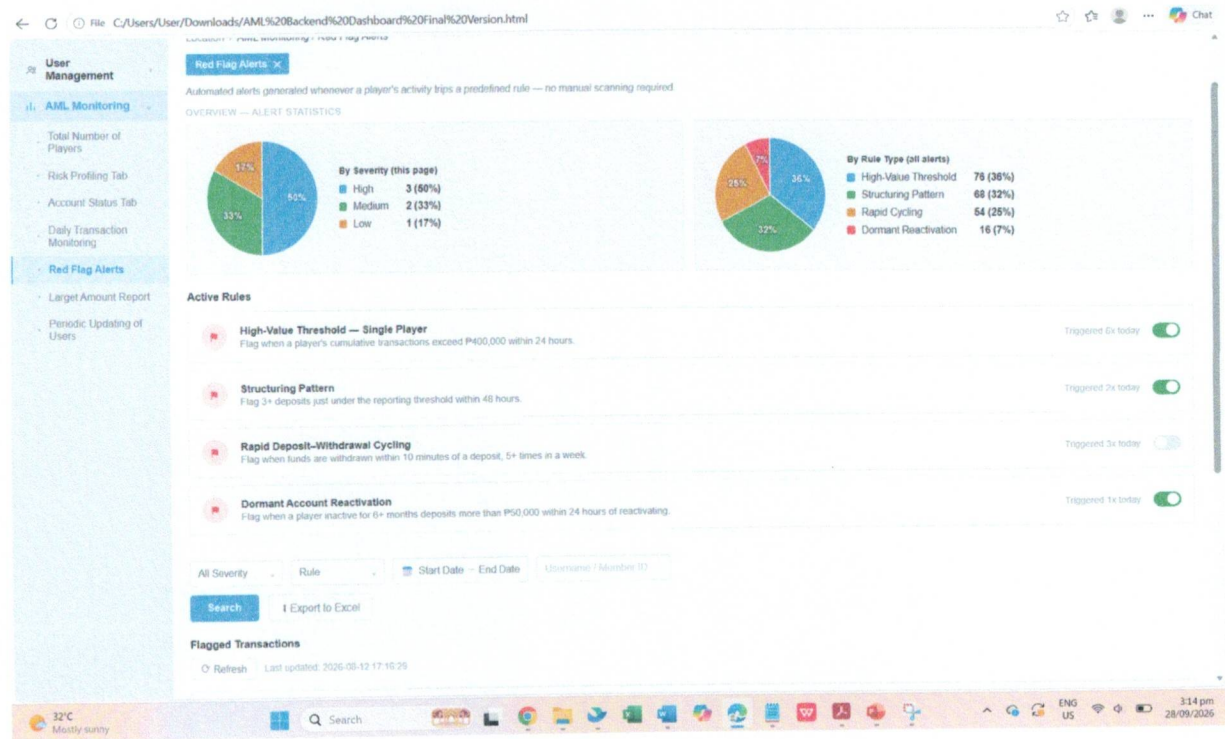

3. Account Status Tab

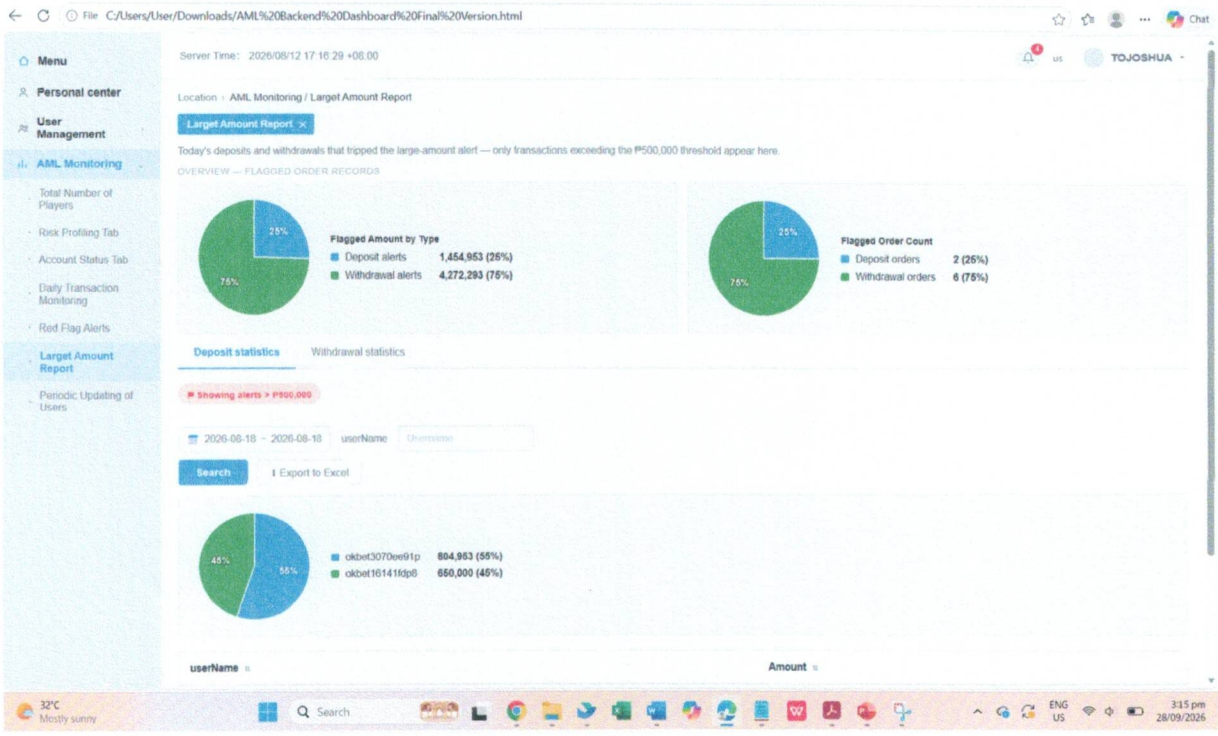

4. Daily Transaction Monitoring

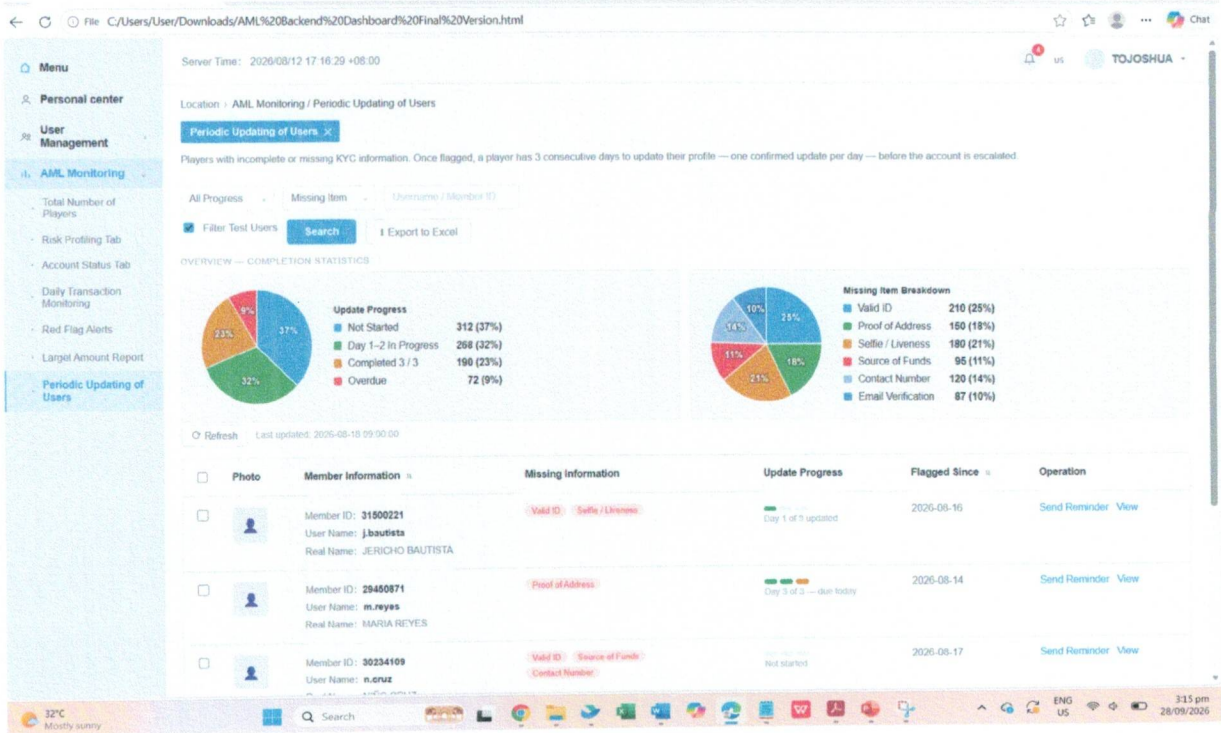

5. Red Flag Alerts

6. Large Amount Report

7. Periodic Updating of Users

The undersigned hereby acknowledge and confirm their review of the foregoing AML Monitoring Dashboard Enhancement Requests and the corresponding requirements for Backend integration and system development. The proposed enhancements are intended to improve the AML/CFT/CPF Department's access to relevant information, strengthen transaction monitoring and risk detection, and support more efficient compliance monitoring and reporting.
